

DOMINATOR 29M

When class meets energy

Original custom design solutions, so that owners can choose materials and finishes and their very own layout: the 29M reflects the shipyard's philosophy of combining fine craftsmanship, top-class features and prestigious materials

The objective was to realize a yacht which would stand out for its **innovative project and design solutions, which can be entirely custom-tailored**, according to the taste and style of the ship-owner, but at the same time respecting the Dominator philosophy. Clean lines and flowing *styling* recall to mind the sobriety of the purest forms of nature. Up against that, the most advanced technical details – reminding of the aircraft and car design - have further enhanced the dynamics idea of the project, assigning to the same a strong and original identity.

Undoubtedly, one of the main innovations on **Dominator 29M** is the **platform** on the left ship's side, which allows the ship-owner a **wholly exclusive access to the sea**. In fact, inside the ship-owner's bathroom, there is a water-tight door on the outer shell with access to the private beach, which consists of the same platform. This opening can also be appreciated from the sleeping side of the ship-owner's cabin, as it is separated from the bathroom by a precious dividing polarized crystal glass. Inside the ship-owner suite, occupying the whole beam side, there is a luxury king-size bed, a wide wardrobe area and a beautiful bath with water-massage.

The peculiar element of the new Dominator range is the **lateral wide window system**, accentuating the flowing lines of the *external* styling of the boat and at the same time, giving a broader space feeling to the living room on the main deck, in view of the panoramic scenery offered by the glass, with direct prospect on the sea.

The original windows on the ship's side suggest an allusion to the natural world, in recalling the shape of a fish gills. Designed to highlight the elegance of the external lines, they also enhance the best development of the interior, by offering a superb view from the ship-owner cabin, on both sides of the hull.

The **roll bar** of the *fly deck* in turn, renders the yacht *styling* extremely smooth and dynamic, thanks to its characteristic shape, which alludes to the typical stern wing of aircrafts. Further, the stanchions of the *roll bar* show a very original display of windows, further enhancing the refined layout of the *fly deck*. In fact, the glass partition protects from sun and wind a large Jacuzzi placed inside and, at the same time, consents the guests to enjoy a marvellous view.

Another innovative characteristic of **Dominator 29M** concerns the **layout of the bow**: with regard to the current range, the *sunbed* position has been in fact reversed with reference to the *dinette*, thus finding itself with the back to the same sunbed. In the same *sunbridge* area a second, comfortable Jacuzzi has been installed.

The interiors of **Dominator 29M** consist of four double cabins with private bathroom, to which the crew quarters, to the stern side, is added and consisting of three cabins and two bathrooms.

These **interiors** can be **entirely custom-made**, be it for offering to the ship-owner a truly custom-tailored service, be it for making every yacht unique in the world. In any case, already in its standard version the interiors combine precious finishing materials with the modern and essential lines, giving interiors elegance and luxury of the highest level. The macassar ebony wood was selected for the main furniture pieces, in conjunction with lacquered claddings and precious leathers with exposed seams. At certain strategic points partitions with slabs of white onyx with back lights are fitted, with the aim of creating changing atmospheres, with pleasant light effects. It is in fact the unusual matching of ebony with white onyx that suggests and highlights new chromatic contrasts.

Light also has taken a fundamental role for the designers: both for external as well as internal, complex studies on light technique were undertaken, with the objective of underlining the shapes and diversifying the interior rooms.

Class and energy, style and vigour come together in a project that succeeds in materializing itself in a single yacht. Interiors and outdoors were studied with the objective of best using the possible realizing synergies.

Hence, the details enhancing the outlines of the boat on the outside, meet up with the further enhancement of the design solutions adopted for the interiors, at the same time. The sophisticated engineering and design solutions, together with the high quality and reliability of the installations are therefore a must, in addition to the unfailing personalizing services, which distinguishes the Shipyard, ever since. **Dominator 29M is a dream come true.**

Technical specifications

Length overall	29,10 m
Maximum beam	6,76 m
Displacement	110 tons
Fuel tank capacity	16000 L
Fresh water tank capacity	3000 L
Engines	2 x MTU from 2185 hp to 2430 hp commonrail
Generator	2 x 35 kW
